

User Manual

Nexyzen plugin for Odoo 19 — Invoice offsetting

Automatically send unpaid invoices to Nexyzen to offset them without bank costs.

Nexyzen is a service by **Camera di Compensazione** · www.nexyzen.com

1. What it is and what it does

Nexyzen is the **Camera di Compensazione** platform that offsets the receivables you still have to collect against the invoices you have not paid yet, **without bank costs**. This plugin connects Odoo to Nexyzen and periodically and automatically sends the **unpaid** invoices:

- **customer invoices** (active) — your receivables;
- **vendor bills** (passive) — your payables.

Invoices are re-proposed on every cycle until they are settled: you never have to remember to resend them.

The plugin is **multilingual**: English, Italian, German, Slovenian, French and Spanish (see §8). The interface follows the Odoo user's language automatically.

2. Where to find it

After installation the **Nexyzen** app appears in Odoo's main menu, with two entries: **Invoices to offset** (the working list) and **Settings**.

New	Invoices to offset	Q	To send	X	Search...	1-3 / 3	<	>
Invoice	Type	Customer/Vendor	Number	Due date	Amount to off...	Status	Sent on	Result
☐ INV/2026/00005	Customer invoice (active)	Rossi S.r.l.	INV/2026/00005	Jul 19	\$ 4,200.00	To send		
☐ INV/2026/00006	Customer invoice (active)	Rossi S.r.l.	INV/2026/00006	Jul 4	\$ 1,850.50	To send		
☐ BILL/2026/07/0002 (BF-2026-114)	Vendor bill (passive)	Bianchi Forniture S.p.A.	BF-2026-114	Jul 15	\$ 3,100.00	To send		

The Nexyzen app and the «Invoices to offset» list.

For each selected invoice the list shows: type (customer/vendor), partner, number, due date, **amount to offset** and status (*To send*, *Sent*, *Error*).

3. Settings

Open **Nexyzen** → **Settings**. The configuration can always be changed. At the top there are two buttons: **Test connection** and **Select and send now** (runs the cycle immediately, useful for a test).

3.1 Selection criteria

Define **which** invoices to send.

WHICH INVOICES

Customer invoices (active) ☒

Vendor bills (passive) ☒

DUE DATE (DAYS FROM TODAY)

From (days to due date) [?] -3,650

To (days to due date) [?] 30

AMOUNT RANGE (RESIDUAL)

Minimum amount [?] 0.00

Maximum amount [?] 0.00

LIMIT TO CUSTOMERS/VENDORS (OPTIONAL)

Bianchi Forniture S.p.A. ✕

Rossi S.r.l. ✕

Settings — Selection criteria.

- **Customer / vendor invoices:** which types to include.
- **Due date (days from today):** *From* / *To* range relative to the due date. Negative values = already overdue. Example: *From* -3650 and *To* 30 = all overdue plus those due within 30 days.
- **Amount range (residual):** minimum and maximum of the amount still to be paid (0 in the maximum = no upper limit).
- **Limit to customers/vendors** (optional): if empty, all are considered.

Settings — Sending mode and days.

- **Sending mode:**
 - **Automatic:** selected invoices are sent immediately;
 - **With manual approval:** a list is prepared for the user to review and confirm before sending (see §5).
- **Sending days:** the weekdays on which the automatic cycle runs (Monday to Saturday; Sunday is not available).

3.3 Connection

Nexyzen Invoices to offset Settings

New Nexyzen Settings 1 / 1

Test connection Select and send now

ne en

Send your unpaid invoices to Nexyzen to offset them.

Selection criteria Sending Connection

Webservice URL [?] http://host.docker.internal/cc_webapp/webservices/index.php

Affiliate code [?] CdC

Token [?]

Notification email [?]

Notification mobile [?]

Settings — Webservice connection.

- **Webservice URL:** the Nexyzen service address. In production: <https://webapp.nexyzen.com/webservices/index.php>.
- **Affiliate code** and **Token:** the credentials provided by Nexyzen (commerciale@cameracompensazione.it).
- **Notification email** and **mobile** (optional): where Nexyzen sends confirmations and alerts.

Tip: after entering the credentials, press **Test connection** to check everything works right away.

4. How the cycle works

Every day a scheduled Odoo action («Nexyzen: daily invoice sending») checks whether the current day is enabled among the **sending days**. If so it:

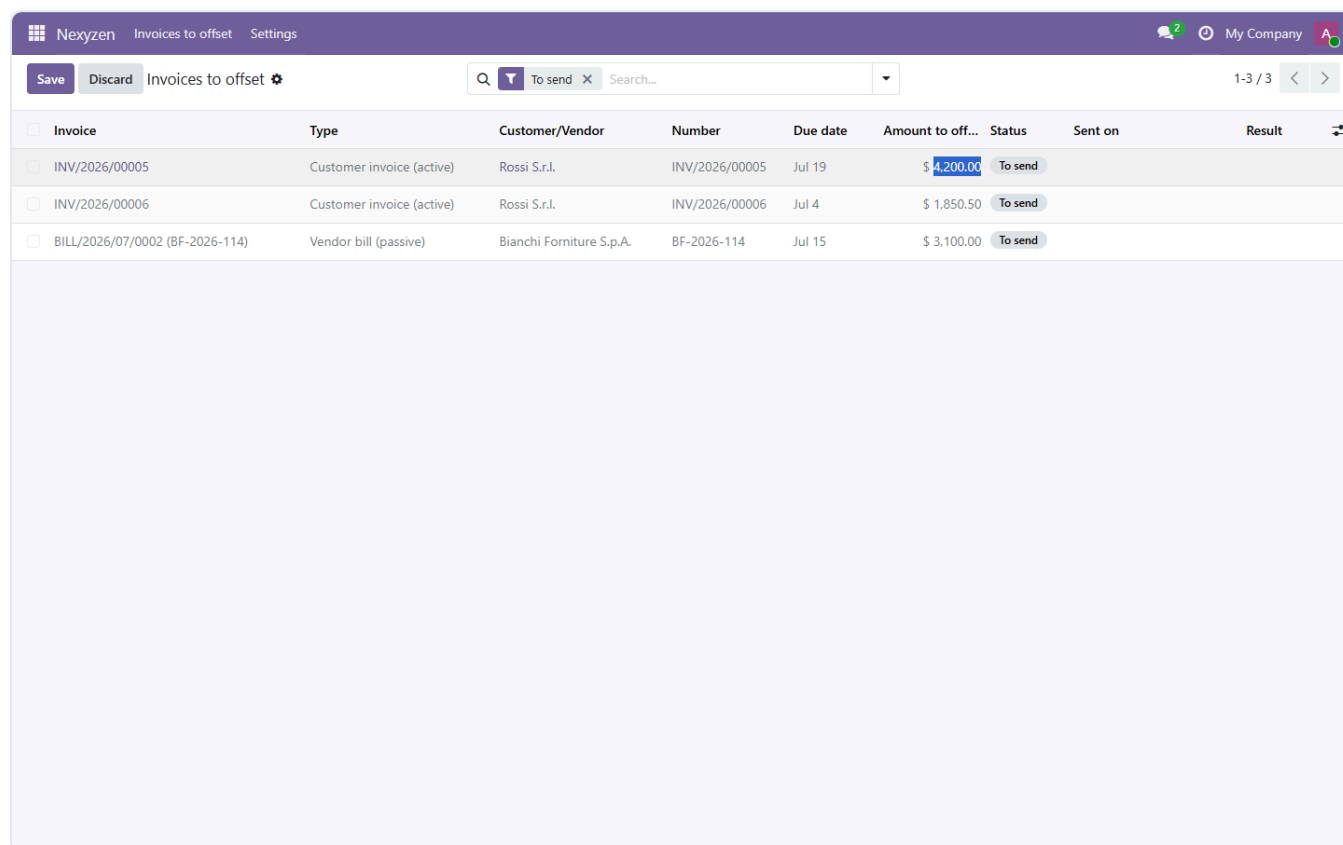

1. selects the unpaid invoices matching the criteria;
2. in **Automatic** mode sends them to Nexyzen straight away;
3. in **Manual approval** mode prepares the list and waits for the user;
4. records the result of each send (*Sent* or *Error*).

You can also run the cycle at any time with **Select and send now**.

5. Manual approval and editing the list

In **Manual approval** mode the selected invoices appear under **Invoices to offset** with status *To send*. The list is **editable**:

- you can correct the **Amount to offset** (pre-filled with the residual, but editable: useful for partial offsetting);
- you can **remove** the rows you do not want to send;
- you select the rows and press **Send to Nexyzen**.

Invoice	Type	Customer/Vendor	Number	Due date	Amount to off...	Status	Sent on	Result
☐ INV/2026/00005	Customer invoice (active)	Rossi S.r.l.	INV/2026/00005	Jul 19	\$ 4,200.00	To send		
☐ INV/2026/00006	Customer invoice (active)	Rossi S.r.l.	INV/2026/00006	Jul 4	\$ 1,850.50	To send		
☐ BILL/2026/07/0002 (BF-2026-114)	Vendor bill (passive)	Bianchi Forniture S.p.A.	BF-2026-114	Jul 15	\$ 3,100.00	To send		

The list is editable: amount editable row by row.

When finished, each row shows the updated status and the outcome message in the **Result** column.

6. Re-proposed until paid

An unpaid invoice is **re-proposed on every cycle**, even if already sent before: it stops appearing only when it is marked **paid** in Odoo. Nexyzen recognises resends of the same invoice (same number, date and creditor) and does not create duplicates.

7. Statuses and results

Status	Meaning
To send	Invoice selected, waiting to be sent (or approved).
Sent	Nexyzen received the invoice correctly.

Error	Sending failed; the reason is shown in the Result column (e.g. missing VAT, connection failed).
--------------	--

8. Multilingual

The interface is available in **English, Italian, German, Slovenian, French and Spanish** and follows the language set for the Odoo user (Preferences → Language). Below, the same screens in other languages.

9. Notes for going live

- Set the production **Webservice URL** and the real **credentials** provided by Nexyzen.
- Make sure the company and the customers/vendors have their **VAT number** filled in: it is the essential data for offsetting.
- Choose the **sending days** and the **mode** (automatic or manual approval) that best fit your operations.
